

CRN - RSI Select Desktop App

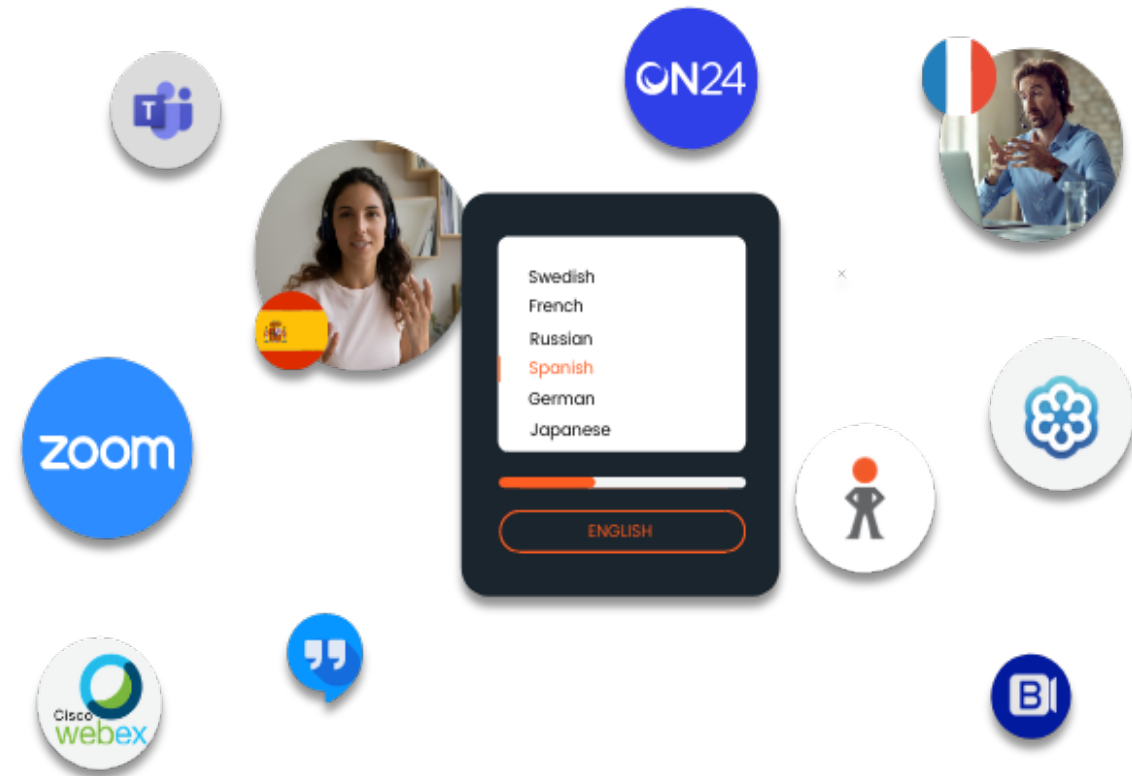

Add interpreting to your meetings & events anywhere!

- With CRN-RSI game-changing new desktop app, participants simply download and install the app from the Windows or iOS app store, select their audio language.
- As soon as the interpreter is speaking, the app will auto-mute all other computer applications to stream crystal-clear live interpretation with low-to-no latency.

Any event, any language, any platform!

- Works alongside any virtual event, streaming, or web conferencing platform
- Users access the event and interpreting on the same device
- Simple installation from [CRN's website](#)
- App automatically switches computer audio, when interpreter is streaming / stops streaming.

How it works!

Book your event!

Set up your event in your preferred virtual platform and book your interpretation services through the CRN member you work with!

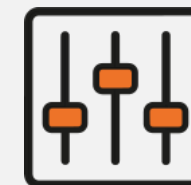

Meeting - event participants

- join the event on the selected platform
- download the CRN-RSI desktop application
- enter the event token
- select the preferred language

Adjusting audio

As soon as the interpreter of the selected language is speaking, the app will auto-mute all other computer applications & provide crystal-clear real-time audio interpretation with nearly zero latency

Audio switch-back

When the interpreter stops streaming, the user selects source language or logs out, the computer audio will instantly switch back to the original audio

Desktop app event simulator

1. Download and install the CRN-RSI app.
2. Go to <https://www.youtube.com/> and play any video.
3. Keep the video playing, open the CRN-RSI desktop app and enter the event token you are given to log into the demo event.
4. Select any language and switch in between languages and source audio.
