

# Website translations with WordPress integration

We provide a smooth website translation experience through the seamless integration of the entire translation process into your WordPress system. You can send all of the content you would like to have translated directly from WordPress with just a mouse click and you will receive it back quickly and conveniently in the WordPress environment. This will ensure that your WordPress site is always up to date in all languages.

## Advantages

### Save time and money

- No manual copying and pasting
- No exporting and importing data
- No double translations: content that has already been translated will automatically be recognised and saved so that it will not be retranslated

### A faster way to get your website content online

- Automated and standardised translation processes will provide you with a faster way to get your multilingual website content online and keep it consistently up to date

### Reduce your IT expenses

- Easy plug-in installation

### Higher-quality translations

- Existing translations will be stored in our translation memory system
- The error rate is substantially reduced through automatic updating of the translations

## Requirement

The WPML Plugin, a WordPress extension, used to create multilingual content.
